

Frequency Response

- Frequency response methods, developed by Nyquist and Bode in the 1930s, are older than the root locus method, which was discovered by Evans in 1948 (Nyquist, 1932; Bode, 1945). The older method, is not as intuitive as the root locus. However, frequency response yields a new vantage point from which to view feedback control systems.
- This technique has distinct advantages in the following situations:
 1. When modeling transfer functions from physical data.
 2. When designing **lead compensators** to meet a steady-state error requirement and a transient response requirement
 3. When finding the stability of nonlinear systems
 4. In settling ambiguities when sketching a root locus

Frequency Response Methods In Control Systems
