Frontier Topics in Nuclear Physics Werner Scheid, Aurel Sandulescu, 2012-12-06 This volume contains the lectures and contributions presented at the NATO Advanced Study Institute ASI on Frontier Topics in Nuclear Physics held at Predeal in Romania from 24 August to 4 September 1993 The ASI stands in a row of 23 Predeal Summer Schools organized by the Institute of Atomic Physics Bucharest in Predeal or Poiana Brasov during the last 25 years The main topics of the ASI were cluster radioactivity fission and fusion the production of very heavy elements nuclear structure described with microscopic and collective models weak interaction and double beta decay nuclear astrophysics and heavy ion reactions from low to ultrarelativistic energies The content of this book is ordered according to these topics The ASI started with a lecture by Professor Greiner on the Present and future of nuclear physics showing the most important new directions of research and the interdisciplinary relations of nuclear physics with other fields of physics This lecture is printed in the first chapter of the book

**Frontier Topics in Nuclear and Astrophysics - Graduate Lectures**, Ziemowid Sujkowski, Grażyna Szeplińska, 1992-04-23 This graduate research level volume covers a range of the issues in nuclear and astrophysics Aimed at graduates entering the field this will also be a valuable reference for established researchers A volume that libraries covering nuclear physics and astrophysics should not be without

**Modern Nuclear Physics** Alexandre Obertelli, Hiroyuki Sagawa, 2021-09-25 This textbook is a unique and ambitious primer of nuclear physics which introduces recent theoretical and experimental progresses starting from basics in fundamental quantum mechanics The highlight is to offer an overview of nuclear structure phenomena relevant to recent key findings such as unstable halo nuclei superheavy elements neutron stars nucleosynthesis the standard model lattice quantum chromodynamics LQCD and chiral effective theory An additional attraction is that general properties of nuclei are comprehensively explained from both the theoretical and experimental viewpoints The book begins with the conceptual and mathematical basics of quantum mechanics and goes into the main point of nuclear physics nuclear structure radioactive ion beam physics and nuclear reactions The last chapters devote interdisciplinary topics in association with astrophysics and particle physics A number of illustrations and exercises with complete solutions are given Each chapter is comprehensively written starting from fundamentals to gradually reach modern aspects of nuclear physics with the objective to provide an effective description of the cutting edge in the field

**Frontiers Topics in Nuclear Structure**, 1993 Frontiers of Fundamental Physics and Physics Education Research Burra G.

Sidharth, Marisa Michelini, Lorenzo Santi, 2014-03-20 In a knowledge based society research into fundamental physics plays a vital role not only in the enhancement of human knowledge but also in the development of new technology that affects everyday life The international symposium series Frontiers of Fundamental Physics FFP regularly brings together eminent scholars and researchers working in various areas in physics to exchange expertise ideas results and new research perspectives The twelfth such symposium FFP12 took place at the University of Udine Italy and covered diverse fields of

research astrophysics high energy physics and particle physics theoretical physics gravitation and cosmology condensed matter physics statistical physics computational physics and mathematical physics Importantly it also devoted a great deal of attention to physics education research teacher training in modern physics and popularization of physics The high scientific level of FFP12 was guaranteed by the careful selection made by scientific coordinators from among 250 submissions from 28 countries across the world During the three days of the conference nine general talks were delivered in plenary sessions 29 invited talks were given in specific topic areas and 59 oral presentations were made This book presents a selection of the best contributions at FFP12 with the aim of acquainting readers with the most important recent advances in fundamental physics and in physics education and teacher development Heavy Elements And Related New Phenomena (In 2 Volumes) Walter Greiner,Raj Kumar Gupta,1999-06-17 This book reviews recent developments in the field of superheavy elements and the related phenomena of fission cluster radioactivity and drip line physics Both the experimental and theoretical aspects are dealt with in detail For the production of new elements in the laboratory the process of cold compound nucleus formation is found to be most favorable both theoretically and experimentally However experimentally hot fusion of nuclei has also been used Both the physical and chemical methods of synthesizing new elements are discussed The theoretical approaches considered here are those of the quantum mechanical fragmentation theory the self consistent Hartree Fock theory and the relativistic mean field theory Fission a process inverse to the fusion of two nuclei is also observed to be most favourably a cold phenomenon Other important results are bi modal fission and high n multiplicity fission which leads to the hyperdeformed scission mode Cluster radioactivity is discussed both as a heavy cluster emission process and as super asymmetric fission The theory as well as the present experimental status are reviewed Physics at drip lines is interesting not only for their structural properties but also for their use in the fusion of two nuclei both aspects are discussed *Nuclei Far from Stability and Astrophysics* Dorin N. Poenaru,Heinigerd Rebel,Jürgen Wentz,2012-12-06 A broad range of topics of current interest are discussed from nuclear structure at the edge of stability to nuclear astrophysics and cosmic ray physics at the highest energies Both the state of the art and basic background information are presented with a particular emphasis on interrelated research interests The writers are all active scientists who enjoy the highest international reputation They cover a range of problems of nuclear structure in particular those concerning exotic nuclei and their decay modes their relevance to nuclear reaction chains in stellar burning processes at various astrophysical sites and as yet unsolved questions concerning the origin acceleration mechanism energy spectrum and elemental composition of high energy cosmic rays Readership Postgraduate physicists interested in the development of modern radioactive beam facilities large array gamma ray and cosmic ray detectors and new theoretical tools **Novel ideas for accelerators, particle detection and data challenges at future colliders** Alessandro Tricoli,Patrizia Azzi,Petra Merkel,Vladimir Shiltsev,2023-07-21 **The 4th International Conference on Exotic Nuclei and Atomic Masses** Carl J. Gross,Witold Nazarewicz,Krzysztof P.

Rykaczewski, 2007-12-10 The International Conference on Exotic Nuclei and Atomic Masses ENAM has gained the status of the premier meeting for the physics of nuclei far from stability The selected and refereed papers presenting the main results constitute valuable proceedings that offer everyone working in this field an authoritative and comprehensive source of reference
